

Braintree Town Council

ORDER NO: 23 056

DATE FILED: SEPTEMBER 5, 2023

REQUEST OF: NATIONAL GRID

National Grid hereby respectfully requests your consent to the locations of mains as hereinafter described for the transmission and distribution of gas in and under the following public streets, lanes, highways, and places of the Town of Braintree and of the pipes, valves, governors, manholes and other structures, fixtures and appurtenances designed or intended to protect or operate said mains and accomplish the objects of said Company; and the digging up and opening the ground to lay or place same:

National Grid hereby respectfully requests your consent to relay approximately 200 feet of 2-inch coated steel (1957) and approximately 580 feet of 2-inch bare steel (1941/1948) with approximately 780 feet of 2-inch plastic gas main in Hobart Street, from the existing 2-inch plastic (2002) at house #142, to the end of main at house #204 with staff recommendations.

BELD: BELD has no conflicts with this location.

DPW: The DPW has reviewed the subject petition and the accompanying plans for the gas main replacement on Hobart St. The work is being proposed as part of a program to eliminate aging gas infrastructure. Hobart St. is not subject to the excavation moratorium, having been resurfaced by total reconstruction in 2003. As such, the DPW recommends that the petition approval contain the following conditions if it is to be so granted:

- A temporary patch shall be placed immediately after the work. The street excavation should be saw-cut, backfilled, and compacted in 8-inch lifts, paved to match existing asphalt depth (with a minimum depth of four inches) in two-inch lifts to match the existing street grade.
- After maintaining the temporary patch through one winter, National Grid must return the following spring to perform a permanent trench repair on all disturbed roadway segments. The permanent patch should be an 8-foot-wide mill and overlay, to a pavement depth of 1.5 inches. If the edge of the permanent patch falls within 2-feet of the roadway gutter, the patch should be extended completely to the roadway edge. Tack coat should be applied to milled surfaces and joints prior to paving. Finished joints should be treated with a rubberized asphalt sealer.

Braintree Town Council

ORDER NO: 23 056

PAGE 2 of 2

We also recommend that the following requirements be added to the permit, if it is to be granted:

- National Grid must arrange a pre-construction meeting with Braintree DPW and Braintree Police Department to discuss utility corridor assignment as well as traffic control for the project. The new gas mains must not encroach on any existing utilities.
- Neither National Grid nor any of its contractors is authorized to close any street or to close a direction of travel to facilitate their work without authorization from the Director of the Department of Public Works or the Highway Superintendent. The Chief of Police can also authorize a closure for a police or fire emergency. Construction zone traffic safety issues are to be addressed by using appropriate traffic control signs and devices and the use of police officers for traffic control to safely guide traffic through the work zone. If a closure is authorized by the DPW, it shall not be implemented until signs and police officers (where needed) are properly in place in conformity with the written plan prepared by the contractor's engineer and approved by the DPW and Police Department.
